

# PlanSync

Where Plans Meet Execution

面向 Human + AI 团队的计划执行同步平台

AMD CDC 2026 AI Hackathon · Beginner Track

# PlanSync 的起点：这次 Hackathon

How a coordination problem on Day 1 became the product we shipped

「我们构建了自己最需要的工具——然后用它完成了这个项目本身。」

*"We built the tool we needed most — then used it to ship the project itself."*

# 这些痛点，每天都在发生

Four Problems That Get Worse With AI

## 工具割裂

5 tools · 0 end-to-end platform

Teams沟通 · Jira任务 · Confluence文档 ·  
Code Review审查 — 各管一段，没有打通

## AI 靠边站

Agents cannot read plan context

Agent不知道计划是什么 · 只能靠人工转达 ·  
信息总是滞后

## 计划漂移

Plan changed silently · Nobody noticed

Owner改了计划 · 执行层无人感知 ·  
直到Merge Day才发现 · 时间被浪费

## 无法追溯

No audit trail · No approval flow

谁改了什么 · 为什么改 · 没有记录 · 没有审批 ·  
没有审批 · 变更即生效

# 这四个问题，在引入 A AI Agent 之后，每一个都被放大了

Each gets worse when AI agents join the team

# PlanSync 的四个核心亮点

Four Core Highlights — What Makes PlanSync Different

## 01 全生命周期覆盖 Full Lifecycle Coverage

从计划创建到任务完成，一个平台  
One platform from plan to delivery

## 02 AI Agent 是协作者 AI as First-Class Participant

48个MCP工具，Agent自己读计划认领任务  
48 MCP tools — agents act autonomously

## 03 执行感知型漂移检测 Execution-Aware Drift Detection

按执行状态分级：运行中=HIGH  
Severity tied to execution state

## 04 版本化计划+审批流 Versioned Plans + Approval Flow

每次变更不可变，全程可追溯  
Immutable versions, full audit trail

所有变更可追踪 · 所有执行可审计 · All changes tracked · All executions auditable

# 端到端 workflow: 从创建计划到完成交付

端到端 workflow End-to-End Workflow: From Plan to Delivery

计划变更时, 系统自动扫描所有任务并按执行状态分级告警

# Architecture: Three Surfaces, One Backend

ts TypeScript 5.7

N Next.js 14

Prisma 5.22

MCP SDK 1.3

Z Zod 3.24

# Step 1 — 项目看板：掌握全局状态

Project Dashboard: Full Visibility at a Glance

# PLANSYNC

PlanSync [Terminal Mode] · alice

Projects (2):

- PlanSync\_Verif v1 ✓ aligned 3/5 tasks
- ▲ PlanSync\_Build v2 2 drifts 1/4 tasks

Tasks: 9 total · 3 done / 2 in progress / 4 todo

Drift: 2 open alerts

[PlanSync] > \_

← 同样的数据，不同的呈现 / Same data, different presentation →

# Step 2 — 计划管理：版本化 + 审批流

Plan Management: Versioned, Reviewed, Activated

## WEB UI MOCKUP

Version history

v1 superseded

v2 active

### Changes in v2 (compared to v1)

Added: New CI gate requirement for build validation

Removed: Deprecated manual sign-off step

⚠ Modified: 2 tasks may need updating due to constraint changes

alice ✓  
✓ Approved

bob ✓  
✓ Approved

Plan activated by alice at 14:32 ACTIVE

### AI suggestions

Consider updating task #3 to reflect new CI requirements

## CLI EQUIVALENT

[PlanSync\_Build] > 对比v1和v2的计划差异

```
plansync_plan_diff  
Added: CI gate requirement  
Removed: manual sign-off  
⚠ 2 tasks affected  
✓ 312ms
```

[PlanSync\_Build] > 激活v2计划

```
plansync_plan_activate  
✓ Plan v2 activated  
⚡ Drift scan triggered: 2 alerts created  
✓ 445ms
```

← 可视化对比 vs 命令行操作 → 结果完全一致 / Visual diff vs CLI command → identical result

# Step 3 — 任务执行：分配、追踪、完成

## Task Execution: Assign, Track, Complete

PlanSync\_Verif / Task detail

PlanSync\_Verif — Active Plan v1

KPI

Active Plan v1

Task Progress

3/5

Task Progress

0/0

KPI Fill/total

0/0

Task Alignment

0/0

✓ Plan Alignment is Perfect — No drifts detected

| #  | Task                          | Avatar | Vad | Status        |
|----|-------------------------------|--------|-----|---------------|
| #1 | Setup testbench structure     |        | v1  | Done ✓        |
| #2 | Write RTL unit tests for ALU  |        | v1  | Done ✓        |
| #3 | Implement functional coverage |        | v1  | In Progress 🔄 |
| #4 | Regression test automation    |        | v1  | Todo          |
| #5 | Final coverage sign-off       |        | v1  | Todo          |

AI

Hi, I am PlanSync AI.

Try asking:  
What should I work on today?

[PlanSync\_Verif] ▶ 查看我的任务

tool call:

| #  | Task                          | Vad | Status        |
|----|-------------------------------|-----|---------------|
| #1 | Setup testbench structure     | v1  | Done ✓        |
| #2 | Write RTL unit tests for ALU  | v1  | Done ✓        |
| #3 | Implement functional coverage | v1  | In Progress 🔄 |
| #4 | Regression test automation    | v1  | Todo          |
| #5 | Final coverage sign-off       | v1  | Todo          |

[PlanSync\_Verif] ▶ 开始执行任务3

plansync\_execution\_start

taskId: TASK-03

✓ Execution started — heartbeat active (30s)

✓ 203ms

💖 Heartbeat: alive

[PlanSync\_Verif] ▶ 完成任务3

plansync\_execution\_complete

✓ Task marked done

✓ 156ms

← 看板视图 vs 终端命令 → 数据实时同步 / Dashboard view vs terminal — real-time sync

# Step 4 — 漂移处置：发现 → 决策 → 继续

Drift Resolution: Detect → Decide → Continue

## WEB UI MOCKUP

## CLI EQUIVALENT

[PlanSync\_Build]> 查看漂移告警

```
plansync_drift_list  
⚠️ DRIFT-01 HIGH – Configure build scripts  
bound v1 → current v2  
⚠️ DRIFT-02 HIGH – Setup CI/CD pipeline  
✓ 231ms
```

[PlanSync\_Build]> rebind DRIFT-01

```
plansync_drift_resolve  
action: rebind  
✓ Task re-bound to plan v2  
✓ Drift resolved – continue execution  
✓ 188ms
```

✓ Drift cleared: 1 remaining

← 点击按钮 vs 输入命令 → 一样快速，一样安全 / Click button vs type command → equally fast and safe

# We Built PlanSync with PlanSync

我们用这个工具完成了这个项目本身 — 真实使用，非概念演示

PlanSync

Build PlanSync

真实使用，非概念演示  
Real usage, not a demo

2次

2人团队，3周开发期，只在第1周开了两次 Teams 会议  
后两周零会议 — 2 人全部在 PlanSync 同步状态  
2-person team, zero meetings weeks 2-3

100%

代码由 Claude Code 生成 All code generated by Claude Code  
Frontend · Backend · MCP tools · Tests — 全栈 AI 生成

8次

计划版本变更，全部走审批流  
Every plan change reviewed and activated — zero manual notifications

0

漂移被遗漏 — 全部被实时检测  
Zero undetected drifts — all caught and resolved before merge

「不是在介绍概念，而是在汇报实践 — 这个工具真的让我们少开了很多会。」
